

A New solution to an Old problem is now available!

Leading SA based industrial supply company, NPA PTY LTD, has proudly released a new, long awaited Nylon Hole Plug and Snap Bushing to fill a gap in its already extensive range of hole sizes.

This new **40mm** size Hole Plug and Bush were specially designed after extensive consultation within the Switchboard Manufacturing, Steel Frame Home Builders and Enclosure Manufacturers etc to a meet a strong demand for these specific size parts.

These parts, which have been eagerly taken up by these industries, are designed to relieve the old, time consuming and labour intensive problem of having to use a glue to help hold a standard 38mm Hole Plug or Snap Bush into a pre punched 40mm hole. Now there is available a simple, fast and efficient solution for either filling an unwanted hole or using a correctly fitting Snap Bush to protect cables and wiring when threading them through panels or framing.

No more messy fiddling with glues, just a quick snap into the hole and the job is done! Suitable for use in panels up to 3.2mm thick, these new time saving parts will result in lower labour costs and increased production.
